

Create an Architecture Diagram for the application below.

The RentSmart application platform is a comprehensive, scalable solution designed to streamline and automate car rental operations. Core requirements include:

- Vehicle and Fleet Management: Track vehicle availability, usage, and maintenance schedules, and integrate GPS tracking for real-time location and status updates.
- Customer Management: Centralize customer profiles, manage registrations, segment customers, and provide loyalty programs, personalized offers, and robust communication (notifications, reminders).
- Booking and Reservations: Allow seamless online and in-branch bookings, with features for selecting vehicles, optional extras, and flexible pickup/return options.
- Billing and Payments: Automate billing, support multiple payment methods, manage security deposits, and handle refunds, late fees, and mileage-based charges.
- Accounting and Financial Tracking: Record revenue, expenses, refunds, and taxes, while generating financial reports and maintaining compliance with regulatory requirements.
- Maintenance and Repair Management: Track fleet maintenance history, schedule repairs, and record repair costs, ensuring vehicles remain rental-ready.
- Integration with External Services: Connect to payment gateways, third-party insurance, vehicle maintenance providers, and other necessary external services.
- Data Security and Compliance: Secure customer data, ensure privacy compliance, and offer role-based access for sensitive data and actions.
- Reporting and Analytics: Generate operational and financial insights, track fleet performance, customer trends, and optimize business decisions based on data.

This platform will provide a seamless customer experience and operational efficiency for RentSmart, ensuring scalability and flexibility for future growth.
